Sequence 15, Application US/09733524

Sequence 15, Application US/09733524

Patent No. US20020068347A1

GENERAL INFORMATION:

APPLICANT: The Governers of the University of Alberta, a Canada Corporation

APPLICANT: The Governers of the University of Alberta, a Canada Corporation

APPLICANT: Taylor, Diane E.

APPLICANT: Taylor, Diane E.

APPLICANT: Taylor, Diane E.

TITLE OF INVENTION: PUCCSTLIRANSFERASES AND EXPRESSION SYSTEMS FOR MAKING AND

TITLE OF INVENTION: WOUGHIER 1050/733,524

TITLE OF INVENTION: EXPRESSING THEM

FILE REFERENCE: 07254/04902

CURRENT FILING DATE: 1998-06-05

PRIOR PLING DATE: 1998-06-05

PRIOR PLING DATE: 1997-06-06

NUMBER OF SEQ ID NOS: 20

SOFTWARE: FBSESEQ for Windows Version 4.0

SEQ ID NO 15

LENGTH: 476
                                                                             APPLICANT: Taylor, biane E.
APPLICANT: Taylor, biane E.

Publication No. US20060123505A1

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Bio-oriented Technology Research Advancement Institution.

APPLICANT: The Institute of Physical and Chemical Research.

APPLICANT: The Institute of Physical and Chemical Research.

APPLICANT: Poundation for Advancement of International Science.

TITLE OF INVENTION: FULL-LENGTH PLANT CDNA AND USES THEREOF

TITLE REPRESENCE: MOA-A0205Y1-US

CURRENT APPLICATION NUMBER: US/10/449,902

CURRENT APPLICATION NUMBER: US/10/449,902

PRIOR APPLICATION NUMBER: US/202-203269

PRIOR APPLICATION NUMBER: JD 2002-203269

Publication No. US20060150283A1

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Brover, Vyacheslav

APPLICANT: Alexandrov, Nickolai

TITLE OF INVENTION: Sequence Determined DNA Fragments and Corresponding

TITLE OF INVENTION: Polypeptides Encoded Thereby

FILE REFERENCE: 2750-1590FUS2

CURRENT APPLICATION NUMBER: US/11/056,355B

CURRENT APPLICATION NUMBER: 60/544,190

PRIOR APPLICATION NUMBER: 60/544,190

PRIOR FILING DATE: 2004-02-13

NUMBER: OF SEQ ID NOS: 119966

SEQ ID NO 15996
          APPLICANT: Bio-oriented Technology Research Advancement Institution.
APPLICANT: The Institute of Physical and Chemical Research.
APPLICANT: The Institute of Physical and Chemical Research.
APPLICANT: Poundation for Advancement of International Science.
TITLE OF INVENTION: FULL-LENGTH PLANT CDNA AND USES THEREOF
FILE REFERENCE: MOA-A0205Y1-US
CURRENT APPLICATION NUMBER: US/10/449,902
CURRENT APPLICATION NUMBER: US/2002-203269
PRIOR PLING DATE: 2003-05-30

Bezila DJ;

New isolated fucosyltransferase polynucleotides and polypeptides, useful for synthesizing oligosaccharides, glycoproteins, or glycolipids. N-PSDB; AEB70148

Claim 2; SEQ ID NO 20; 97pp; English.

The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucosyltransferase polynucleotides and polypeptides are useful for the synthesis of oligosacchardes, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase prolyniciansferase polynucleotides and polypeptides are useful for the sequence is Helicobacter pylori fucosyltransferase protein.

termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucosyltransferase polynori. This enzyme catalyzes the transfer of a fucosyltransferase polynucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein. Note: The present sequence is the SEQ ID No: 22 which is shown in the example 4 (figure 21) of the specification. This sequence differs from the SEQ ID NO: 22 given in the sequence listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated fucosyltransferase polynucleotides and polypeptides, useful for synthesizing oligosaccharides, glycoproteins, or glycolipids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides alpha-1,3/4-fucosyltransferase (also

The invention describes a complex of protein-protein interactions in Helicobacter pylori selected from 421 complexes given in the specification. The complex of protein-protein interactions are useful for screening for agents which modulate the interaction of proteins. Modulating compounds which binds to a targeted bacterial protein may be used for treating or preventing ulcers in a human or animal. This is the amino acid sequence of a selected interacting domain (SID), identified via protein-protein interactions. Note: Where the patent number printed at the top of the pages in the specification has obscured areas of protein sequence, the indexer has replaced the residue with an X to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      complexes of protein-protein interactions in Helicobacter pylori, inl for identifying modulating compounds for treating or preventing

The invention relates a purified transmembrane segment-free alpha 1,3-
fucosyltransferase polypeptide, having a repeat of the sequence: X_1-X_2-
Leu-Argor_X 3-x 4-Tyr, where X 1, X_2 and X 4 is Asp or Asn; and X 3 is
Leu-Argor_X 3-x 4-Tyr, where X 1, X_2 and X 4 is Asp or Asn; and X 3 is
Leu-Argor_X 3-x 4-Tyr, where X 1, X_2 and X 4 is Asp or Asn; and X 3 is
Leu-Argor_X 3-x 4-Tyr, where X 1, X_2 and X 4 is Asp or Asn; and X 3 is
CC clie, Val or Ala. Also included are the nucleic acid encoding the protein

(including its complement or fragment), a vector containing the nucleic
acid, a host cell modified with the nucleic acid or its
comparising a host cell modified with the nucleic acid or its
comparising a host cell modified with the nucleic acid or its
contacting flucosylated oligosaccharides, such as Lex, Ley or SLex by
contacting the protein with a substrate such as Lex, Ley or SLex by
contacting the protein with a substrate, to produce oligosaccharides
and purifying the obtained oligosaccharides, or by culturing the cell,
contacting the host cell with a substrate, to produce oligosaccharides
and purifying the obtained oligosaccharides, or by culturing the obtained oligosaccharides. The nucleic acid is useful
contacting the nucleic acid using polymerase chain reaction (FCR). The
nucleic acid probe that hybridises to alphal,3-fucosyltransferase
polymucleotide, and detecting hybridisation of the probe; or by
muplifying the nucleic acid using polymerase chain reaction (FCR). The
host cell is useful for producing a transmembrane segment-free alphal,3-
fucosyltransferase-fusion protein, by growing the host cell containing a
vector operably linked to a polynucleotide encoding a desired polypeptide
cor peptide under conditions which allow expression and secretion of the protein in the
sample is indicative of infection by Helicobacter pylori or the presence
of malignant cells. The antibody is also useful for laphal,3-
fucosyltransferase gene produce and for inhibiting advantant and suring
fucosyltransferase gene prod

This invention relates to novel isolated polynucleotides and the encoded polypeptides thereof, which are related to the fucosyltransferase enzymes (PutA and FutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 26695 FutA protein sequence of the invention.
                                                                                                                                                                                   ö
                                                                                                                                                                                                                                            228 BFLSQYKFNLCFENSQGYGYVTEKILDAYFSHTIPIYWGSPSVAKDFNPKSFVNVHDFNN 287
the protein or cell are useful in the development of assays to detect mammalian tumours. The present sequence represents an H. pylori alphal, 3 fucosyltransferase encdoed by the fucT gene. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide encoding fucosyltransferase protein, useful for synthesizing oligosaccharide moiety on a protein or lipid that is unglycosylated in its native form or for synthesizing glycolipids.
                                                                                                                                                                                                                        225 RFLSQYKFNLCFENSQGYGYVTEXILDAYFSHTIPIYWGSPSVAKDFNPKSFVNVHDFNN

termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polynucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycoligids. The present sequence is Helicobacter pylori fucosyltransferase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              225 EFLSQYKFNLCFENSQGYGYVTEKILDAYFSHTIPIYWGSPSVAKDFNPKSFVNVHDFNN 284

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated alycoprotein. The method involves contacting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a sylycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate to the sylvoprotein. The method is useful for producing fucosylated glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Producing fucosylated glycoprotein, by contacting recombinant fucosyltransferase protein with mixture comprising donor substrate and acceptor substrate on glycoprotein.

```
Helicobacter pylori; strain 26695A
x_0
```

The invention relates a purified transmembrane segment-free alpha 1,3
Eucosyltransferase polyseptide, having a repeat of the sequence: X 1-X 2
Leu-Arg-X 3-X 4-Tyr, where X 1, X 2 and X 4 is Asp or Asn; and X 3 is

Leu-Arg-X 3-X 4-Tyr, where X 1, X 2 and X 4 is Asp or Asn; and X 3 is

Ile, Val or Ala. Also included are the muclaic acid encoding the protein

C (including the complement or fragment), a vector containing the nuclaic

acid, a host cell containing nuclaic acid or vector, an antibody which

selectively binds to the protein and a gene expression system for

comprising a host cell modified with the nuclaic acid or its

This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polynucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated fucosyltransferase polynucleotides and polypeptides, useful for synthesizing oligosaccharides, glycoproteins, or glycolipids.
                                                           Helicobacter pylori fucosyl transferase, PutB, protein, SEQ ID NO: 16.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               H. pylori fucosyl transferase, FutA, protein fragment, SEQ ID NO: 66.

This invention relates to novel isolated polynucleotides and the encoded polypeptides thereof, which are related to the fucosyltransferase enzymes (Puth and FutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of altocoyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 1111 PutA protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated
                                            New isolated polynucleotide encoding fucosyltransferase protein, useful for synthesizing oligosaccharide moiety on a protein or lipid that is unglycosylated in its native form or for synthesizing glycolipids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          contacting recombinant comprising donor substrate and

                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polynucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase catalytic domain (amino acids 27-417) protein fragment.
                                                                                                                                                                                                                                                                                                                         New isolated fucosyltransferase polynucleotides and polypeptides, useful for synthesizing oligosaccharides, glycoproteins, or glycolipids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FutA; FutB; alpha 1-3/4 fucosyltransferase; glycoprotein; glycolipid; fucose; N-acetylglucosamine; glycoconjugate; enzyme.

The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated fucosyltransferase polynucleotides and polypeptides, useful for synthesizing oligosaccharides, glycoproteins, or glycolipids.
          fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate on the glycoprotein. The method is useful for producing fucosylated glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Helicobacter pylori fucosyl transferase, FutA, protein, SEQ ID NO: 4.

The invention relates a purified transmembrane segment-free alpha 1,3-
tucosyltransferase polypeptide, having a repeat of the sequence: X 1-X_2-
Leu-Arg-X 3-X 4-Tyr, where X 1, X 2 and X 4 is Asp or Asn; and X 3 is
Leu-Arg-X 3-X 4-Tyr, where X 1, X 2 and X 4 is Asp or Asn; and X 3 is
Leu-Arg-X 3-X 4-Tyr, where X 1, X 2 and X 4 is Asp or Asn; and X 3 is
Leu-Arg-X 3-X 4-Tyr, where X 1, X 2 and X 4 is Asp or Asn; and X 3 is
C (including its complement or fragment), a vector containing the mucleic
acid, a host cell containing mucleic acid or vector, an antibody which
selectively binds to the protein and a gene expression system for
producing transmembrane segment-free alpha 1, 3- fucosyltransferase,
comprising a host cell modified with the nucleic acid or its
comprising a host cell modified with the nucleic acid or its
producing fucosylated oligosaccharides, such as Lex, Ley or Slex, by
contacting the protein with a substrate such as Lex, Ley or Slex, by
contacting the bost cell with a substrate, to produce oligosaccharides
contacting the host cell with a substrate, to produce oligosaccharides
contacting the bottained oligosaccharides. The nucleic acid is useful
contacting the obtained oligosaccharides or by
contacting the obtained oligosaccharides or by
contacting the nucleic acid using polymerase chain reaction (PCR). The
nucleic acid probe that hybridiase to alpha1,3-fucosyltransferase
contacting the nucleic acid using polymerase chain reaction (PCR). The
nost cell is useful for producing a transmembrane segment-free alpha1,3-
copyltransferase-fusion protein. by growing the host cell containing a
cvector operably linked to a polyuciceoring the presence of the protein in a sample. The presence of malliant cells. The antibody is also useful for discontant of infection by Helicobacter pylorior or the protein in a sample. The presence of malliant cells. The antibody is also useful for discontance and for inhibiting abnormal alpha1,3-
contacting the protein in a supplemental or sample contained to a roll are useful i

Sequence 2, Application US/10189977A

Sequence 2, Application US/10189977A

Patent No. 6962806

GENERAL INFORMATION:

APPLICANT: TAYLOT, Diane B.

APPLICANT: Ge, Zhongming

TITLE OF INVENTION: FUCOSTIFRANSFERASES AND EXPRESSION SYSTEMS FOR MAKING AND

TITLE OF INVENTION: EXPRESSING THEM (amended)

TITLE OF INVENTION: EXPRESSING THEM (amended)

FILE REFERENCE: 07254-049002

CURRENT APPLICATION NUMBER: US/10/189,977A

CURRENT FILING DATE: 2000-12-07

PRIOR FILING DATE: 1990-06-05

PRIOR APPLICATION NUMBER: US 09/092,315

PRIOR APPLICATION NUMBER: US 09/092,315

PRIOR FILING DATE: 1997-06-06

NUMBER OF SEQ ID NOS: 27

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 2

LENGTH: 486
                      APPLICANT: Ge, Zhongming

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 16, Application US/09733524

Patent No. US20020068347A1

GENERAL INFORMATION:

APPLICANT: The Governers of the University of Alberta, a Canada Corporation

APPLICANT: Taylor, Diane B.

APPLICANT: Taylor, Diane B.

APPLICANT: G. Zhongming

TITLE OF INVENTION: FUCCOSTLTRANSFERASES AND EXPRESSION SYSTEMS FOR WAKING AND

TITLE OF INVENTION: EXPRESSING THEM

FILE REFERENCE: 07254/049002

CURRENT APPLICATION NUMBER: US/09/733,524
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     49 FILKQRYKIILHSNPNBPSDLVFGNPLEQARKILSYQNTKRVFYTGENBVPNFNLFDYAI 108
